Introduction to HTML

HTML stands for HyperText Markup Language. It is the standard language used to structure content on the web. HTML defines headings, paragraphs, links, images, lists, tables, forms, and page sections.

1. Basic HTML document structure
Every HTML page usually contains:
- <!DOCTYPE html>
- <html>
- <head>
- <title>
- <body>

Example:

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Page</title>
  </head>
  <body>
    <h1>Hello World</h1>
    <p>This is my first HTML page.</p>
  </body>
</html>
```

2. Headings and paragraphs
HTML provides headings from h1 to h6.
- <h1> is the main heading
- <p> defines a paragraph

3. Links and images
- <a> creates a hyperlink
- <img> displays an image

Example:

```
<a href="https://example.com">Visit Example</a>
<img src="photo.jpg" alt="Sample photo">
```

4. Lists
HTML supports:
- ordered lists with
- unordered lists with
- list items with

5. Tables
Tables are created with:

- <table>
- <tr>
- <th>
- <td>

6. Forms
Forms collect user input.
Common form elements:
- <form>
- <input>
- <label>
- <textarea>
- <button>

7. Semantic HTML
Semantic tags improve structure and accessibility.
Examples:
- <header>
- <nav>
- <main>
- <section>
- <article>
- <footer>

8. Good practices
- Use meaningful headings
- Add alt text to images
- Keep structure clean
- Use semantic elements when possible
- Indent code for readability

Conclusion
HTML is the foundation of web development. Understanding document structure, text elements, links, lists, tables, forms, and semantic tags helps beginners create clear and accessible web pages.
